

# *Visual Test Shell*

## **Installation Guide**

*Design File*

**14-Jun-2000**

This document provides an Installation Guide for the Windows® 95/98 and Windows® NT version of the Visual Test Shell (VTS). VTS is a suite of programs which provide interactive test and diagnostic functions to assist in developing and debugging BACnet™ products. VTS currently supports up to two Ethernet and/or ARCNET network adapters simultaneously. Setting up the

6. Using the "Install from Disk" Window, navigate to the drive and folder where VTS was installed and select the ARCNET subfolder, then select either CCSI for the PCM20 or SMSC

## Installation Procedure for Windows NT

### ***Installation/Deinstallation Order for Windows NT***

There are three main steps of installation before the Windows NT version of VTS is fully functional:

- Installation of the Network Adapter(s)
- Installation of VTS Components
- Installation of BACMACNT Components

***Installation of BACMAC95 Components for Windows NT***

Following installation of the VTS components, the BACnet MAC-layer protocol component must be installed and bound to at least one network adapter. Following the procedure in this section results in the installation of:

- BACMACNT.SYS
